[<sup>18</sup>F]WC-DZ-F is a derivative of [<sup>18</sup>F]FluorThanatrace and a radiotherapeutic agent. [<sup>18</sup>F]WC-DZ-F has suitable biodistribution profile, favourable logP and super metabolic stability in vivo. We have demonstrated that [<sup>18</sup>F]WC-DZ-F is capable of imaging PARP-1 expression in PC-3 prostate cancer xenograft tumor in small animal. [<sup>18</sup>F]WC-DZ-F can be a replacement of [<sup>18</sup>F]FluorThanatrace in the imaging of PARP-1 expression.
